Metapack Integration

By integrating Metapack with your business software you will remove repetitive data entry, increase employee productivity and improve visibility of all sales deliveries across your business. Could your business benefit from automation?
The Problem

Metapack is a superb SaaS delivery management system providing a single point of integration to 400+ carrier networks and 4,900+ delivery services. However, if your business uses a CRM, ERP or financial system, then inputting orders from them and extracting delivery information from Metapack will be a time-consuming process.

The Solution & Commercial Benefits

Codeless Platforms' Metapack Integration Connector automates the flow of information between Metapack and your business software. This provides:

- Improvement in speed of deliveries
- Removal of repetitive data entry
- Employee productivity increased
- Enhanced visibility of sales and deliveries across the business

Metapack Integration

Extracting and pushing orders into Metapack

Order fulfilment is a critical element of your business operations. Any orders taken in your business systems will require a dedicated employee or despatch team to manually extract them and place them with Metapack for fulfilment. It's a repetitive job, but it needs to be done.

Codeless Platforms' Metapack Connector can remove this manual process by automatically extracting the orders from your systems and seamlessly pushing all the data into Metapack for fulfilment.

Pulling data back from Metapack for use in other applications

Metapack provides you with a wealth of valuable information such as tracking numbers and delivery notifications. But putting that information to good use needs more valuable employee time and admin.

Codeless Platforms' Connector will automatically retrieve all relevant delivery details and push that data into your existing CRM, ERP or financial system. Intelligence data (Shipping trends, faults or delivery failures) and reports (Carrier performance / Service selection) that are generated within Metapack can also be automatically extracted.

Gaining full visibility of returns data

Customers also expect a proficient returns service. Metapack provides a returns portal that can facilitate this requirement, but this data needs to be shared across all business systems to provide visibility and ensure stock levels are up to date.

Codeless Platforms' Metapack Connector can automatically retrieve all returns data from Metapack and enter this information into your CRM or ERP systems, as well as automatically update your warehouse and all relevant eCommerce stores.
